## **Customer Reviews**

I just purchased this book last week and it is a great text book. Dr Martini is one of the best in the field of Anatomy and Physiology, so this text book you will want to keep for future references. With that said.. Do yourself a favour and just get the 8th edition. I returned my 9th edition. I just do not see the justification to charge someone almost \$200 for a new book when the previous edition is almost the exact same, with just replacing of pictures. The 8th Edition can be purchased for less than \$35 bucks here on (ISBN-10: 0321505719). Both the 8th and 9th edition even have the same amount of pages, 1264 pages to be exact... something is fishy... New pictures, replacement of cover? I am pretty certain that most college students are pretty much on the verge of being broke, or soon to be for that matter. Always try to get the previous edition if you can, you save a lot of money, around 1/5 the price. These publishers just drive me nuts, I understand they need to make money, but come on, most of these books are never completely rewritten and they come out with a new edition every 2-3 years and those editions like this one, are almost exactly the same, except for

replacement of pictures and a few updated stories/examples. It seems crazy how a book that is just two years old seems to be considered no longer usable.--\*Update\*: The previous edition (8th) is now selling for less than \$5 bucks. You are better off with that one, plus you will want to keep it for your second A&P class, or at least as a reference to look back at later on. For most A&P students, you will cover the first chapter all the way to the nervous system. In A&P II you will probably start with the Endocrine System or chapter 15.

The 8th Edition can be purchased for less than \$35 bucks here on (ISBN-10: 0321505719). Both the 8th, 9th edition and yes this 10th edition have the same amount of pages, 1264 pages to be exact... something is fishy... New pictures, replacement of cover? I think so too. Here comes those critical thinking skills you learned in logic class. I am pretty certain that most college students are pretty much on the verge of being broke, or soon to be for that matter.
